

Biostatistics

Biostatistics

We provide our researchers and clinical trials investigators with the Information, data management, analysis, and statistical interpretations they require.

Our team protects the privacy and personal data of clinical trial participants. Pubrica experts help you to design questionnaires, create data collection forms, design study protocols, implement study protocols, database management, and web programming. Our team of statistical programmers, database/web programmers, and data managers have experience in study design, electronic data capture, and subject tracking systems, quality control procedures, and statistical methods. These services are combined and customized to meet your project requirements.

The Pubrica creates systems and procedures to avoid many of the difficulties typically encountered in research collaborations. With an experienced team of data professionals, we can provide data management and procedural

consistency to ensure the highest quality data.

With the onset of clinical trials and pharmaceutical studies, it has developed in the directions of clinical trial methodology, health outcomes research, survival analysis, longitudinal models and generalized linear models of various types. This typically includes; modern statistical computing, frequentist methods, nonparametrics, likelihood and Bayesian approaches, mathematical statistics, design of experiments, linear models, survival analysis, longitudinal analysis, latent variable models, nonlinear models, categorical data analysis and clinical trials.

Faculty serve on interdisciplinary research teams and provide expertise in statistical methodology, sample size estimations, data analysis, techniques for handling missing data, design of experiments, robust estimation, survival analysis, analysis of microarray data, genomics, and proteomics.

Research areas include biostatistics methods and applications, bioinformatics related to

cancer, osteoporosis, respiratory and cardiovascular disease, health informatics and data analytics, big data, data capture, management analysis for large clinical trial studies.

Our statisticians have decades of industry experience providing prompt and accurate reports, statistical summaries and efficacy and safety analyses. From the initial stage of study design planning to final stages of data analysis and interpretation

Our biostatistical expertise includes:

- > Statistical consulting for drug and device development
- > Clinical trial randomization services
- > Sample size calculation and power calculation
- > Statistical analysis report writing for clinical study reports and/or manuscripts
- > Integrated efficacy and safety summaries
- > Data safety monitoring board support and participation
- > Multifaceted statistical approaches including pooled analyses and meta-analyses
- > Health economics and comparative effectiveness research
- > Detailed statistical input for protocols and evaluations
- > Detailed statistical analysis plans (SAPs) and table designs

Statistical Programming

Our team provides scalable statistical support. We have highly qualified, seasoned programmers who ensure the flexibility to meet your unique needs and internal guidelines. We can work with your templates or ours, or we can create a set of programming templates specific to your organization.

CDISC Implementation

Pubrica understands how to implement and use the current CDISC standards for data collection and submission. Get solutions to real-world data problems.

Our comprehensive biostatistical services include the following:

- > Genomics and genetics
- > Brain imaging
- > Medicare data
- > Clinical repository development
- > Data algorithm development
- > Programming big data
- > Bayesian analysis
- > Predictive modelling
- > Health economics
- > Model interpretation

Our data analytics includes the following:

- > Conjoint analysis
- > Clinical trial analysis
- > Database analytics
- > Claims data analysis
- > Predictive analytics

Our data analytics includes the following:

- > Clinical Trial Study Design
- > Sample Size Calculation
- > Statistical Power Determination

- > Statistical Analysis Plan (SAP)
- > Development of TFLs
- > SAS programming for TFL's
- > SDTM and ADaM compliant datasets

Our biostatistics analysis includes the following:

- > R
- > Hadoop
- > Python
- > Tableau
- > R-Shiny
- > Plotly

Data Management & Analysis: Research Advantage

Our team of data management specialists, analysts, programmers and biostatisticians supports the information and analysis needs of researchers throughout Aurora Health Care.

We have three main areas of responsibility:

Data management: We manage the systems that track people participating in clinical trials. Our oversight ensures patient safety and privacy and project compliance with regulations.

Information retrieval: Our data experts find the information researchers need to conduct their research and clinical trials.

Analysis and interpretation: Analysts and biostatisticians analyze and interpret data from research and clinical trials.

Electronic Health Records

Electronic health records store people's health histories so physicians can understand their patients more fully and make the best treatment choices. For researchers and physicians running clinical trials, these records are important for choosing suitable candidates and evaluating health outcomes after the trial. Our team is responsible for the following

Updates: Physicians need to know when their patients are participating in clinical trials for drug interaction and treatment safety reasons. We work with clinical trial coordinators to keep participants' records consistently up to date.

Recruitment: We can provide reports to clinical trial coordinators that identify potential candidates for clinical trials based on their health and treatment history. The coordinator will confirm if the patient may be a good candidate. If so, the coordinator will suggest a physician or another clinician inform that person of an upcoming trial and ask if he or she is interested in participating.

Consent: We track consent information to ensure compliance with the regulations. Follow-up data: Our up-to-date system of participants in clinical trials allows researchers to contact people for follow-up evaluations or to recommend another trial for a particular participant.

Types of Literature Review: We undertake different types of literature reviews Traditional or narrative literature review, Systematic literature review, Meta-analysis.

Pubrica Offerings

Pubrica offers you complete publishing support across a variety of publications, journals, and books. You can now morph your concepts into incisive reports with our array of writing services: regulatory writing, Clinical Report Forms (CRF), biostatistics, manuscripts, business writing, physician reports, medical writing and more. Experts in Science, Technology, Engineering and Mathematics

(STEM), and pundits with therapeutic repertoire. Publishing that medical paper or getting a regulatory drug approval is now easy. Save time and money through Pubrica's support.

ABOUT US

Pubrica Scientific Writing & Publication offers comprehensive medical, scientific, technical, and business writing services. We offer an array of writing services: manuscript writing, regulatory writing, Clinical Report Form (CRF) writing, biostatistical report writing, academic and business writing, physician writing, medical writing and more. Subject-Matter Experts (SMEs) in Science, Technology, Engineering, and Mathematics (STEM), and pundits with therapeutic repertoire. Publishing that medical paper or getting a regulatory drug approval is now easy. We assist you in every phase of your project.
